Art Unit: 1742

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Naik.

Naik discloses the invention substantially as claimed. Naik discloses a nickel base superalloy composition comprising:

8.0-14.0% Cr;	(3-12% claimed)
3.0-10% W;	(3-10% claimed)
2.5-7.0% Al;	(5-7% claimed)
3.0-6.0% Ta;	(3-12% claimed)
to about 1% Hf;	(0.03-0.8% claimed)
0.005-1% Y;	(0.0005-0.050% claimed in claims 3 and 13)

The Examiner notes that other elements in the claimed invention have amounts ranging down to zero.

Naik further discloses at col. 8, lines 20-55, wherein an aluminide coating is upon the substrate, formed both by pack and vapor phase coating, reading upon both inwardly and outwardly diffusional coatings.

Art Unit: 1742

Furthermore, the Examiner notes that the amount of sulfur, while silent in the invention of Naik, is a known impurity to be held to a minimum, such minimums known to be 2 ppm as demonstrated by EP 0676489A.

The claims and the reference differ in that the reference does not teach an alloy that overlaps all the proportions of the claimed alloy but rather with respect to the alloying elements content closely approximate the claimed alloying elements content.

However, one of ordinary skill in the art at the time the invention was made would have considered the invention to have been obvious because the alloying elements content taught by the reference and the claimed alloying elements are very similar and closely approximate each other, therefore one of ordinary skill in the art would have expected the alloy taught by the reference and the instantly claimed to have the same properties. See *in re Peterson*, 65 USPQ2d 1379, 1382, citing *Titanium Metals Corp. v. Banner*, 227 USPQ 773, 779 and MPEP 2144.05.

“a *prima facie* case of obviousness exists where the claimed ranges and prior art ranges do not overlap but are close enough that one skilled in the art would have expected them to have the same properties. *Titanium Metals Corp. of America v. Banner*, 778 F.2d 775, 227 USPQ 773 (Fed. Cir. 1985) (Court held as proper a rejection of a claim directed to an alloy of “having 0.8% nickel, 0.3% molybdenum, up to 0.1% iron, balance titanium” as obvious over a reference disclosing alloys of 0.75% nickel, 0.25% molybdenum, balance titanium and 0.94% nickel, 0.31% molybdenum, balance titanium.).
